

Update: 24th Sept 2019

Dear Residents,

You may have noticed the delivery of several tonnes of recycled road planings overnight. These have now been distributed throughout the entire length of The Avenue to repair the worst of the potholes, etc

This is an interim repair that will allow the road to be safer and more driveable in the short term.

There is still an urgent need to make a full repair.

The full repair will involve adding further recycled planings to the road and the use of specialised equipment to create a complete and uniform surface up the entire length and width of The Avenue that can be maintained on an ongoing and regular basis ensuring the road does not fall into disrepair again.

You may have also noted the heavy rain during the repair. We had already been advised by the road contractor in advance of the rain that due to the material we were using, whilst still subject to continued erosion through traffic flow, it would be more resistant to water erosion than other substrates available for our use.

For the reasons stated above, it is imperative that we continue to raise the funds necessary to be able to achieve the full repair. Therefore, I would urge anyone in receipt of a payment request to please make the necessary payment as soon as possible.

We thank you for your patience and support.

Regards

On behalf of The Association
